Exercise2-MLP BP

在这个练习中,你需要以三层感知机为例,使用反向传播算法更新MLP的权重和偏置项,并将推导过程以报告的形式提交。

MLP以及权重、偏置项的定义如下:

Define S_w and S_b as:

$$S_w = \sum_{c=1}^{C} \sum_{\boldsymbol{y}_i^M \in c} (\boldsymbol{y}_i^M - \boldsymbol{m}_c^M) (\boldsymbol{y}_i^M - \boldsymbol{m}_c^M)^T$$

$$S_b = \sum_{c=1}^{C} n_c (\boldsymbol{m}_c^M - \boldsymbol{m}^M) (\boldsymbol{m}_c^M - \boldsymbol{m}^M)^T$$
(1)

where m_c^M is the mean vector of y_i^M (the output of the *i*th sample from the *c*th class), m^M is the mean vector of the output y_i^M from all classes, n_c is the number of samples from the *c*th class. Define the discriminative regularization term $tr(S_w) - tr(S_b)$ and incorporate it into the objective function of the MLP:

$$E = \sum_{i} \sum_{j} \frac{1}{2} (\mathbf{y}_{i,j}^{M} - \mathbf{d}_{i,j})^{2} + \frac{1}{2} \gamma (tr(S_{w}) - tr(S_{b})). \tag{2}$$

where $y_{i,j}^M$ is the jth element in the vector y_i^M , $d_{i,j}$ is the jth element in the label vector d_i , tr denotes the trace of the matrix. Use the BP algorithm to update parameters W and b of the MLP.

作业提交要求:

- 1. 推导过程需用公式编辑器进行编辑,可以使用word自带的公式编辑器,也可以使用overleaf中的latex模板。
- 2. 作业以pdf格式提交,命名方式为: *第二次作业-学号-姓名"* (若未按该命名方式命名,该项作业小分扣2分),发送至邮箱 nk ml 2022@163.com。
- 3. 作业截止日期: 2022年11月25日24:00。
